

PLANA TRANSMITTER SWITCH

This transmitter is wireless, without battery, so without maintenance. Totally **STAND-ALONE**, it sends a radio signal thanks to power supplied when pressing keys on the switch.

MODULAR AND MOBILE: The transmitter switch can be placed at any place on a wall and be moved at will. Its adapted bottom allows to fix it on wall with screws or to stick it with double-sided adhesive tape.

- ➔ It is especially convenient for electrical installations without embedding, for example: renovations, modification of home or office with moving walls.
- ➔ Just press a switch key to manage any devices via receivers. Before any use, the switch must be associated to a receiver (see receiver's documentation for programmation).

CODE 10020001	PLANA TRANSMITTER SWITCH 2 KEYS WHITE

SPECIFICATIONS

Main features

Transmission frequency	868.3MHz
Transmission power	10mW max
Switch transmitter dimensions	base 80x80mm x height 15mm
Operating temperature	from -25°C up to +65°C
Storage temperature	from -25°C up to +65°C
Commutation cycles	> 50.000
Certifications	CE et R&TEE directive 1999/5/CE
Air relative humidity	from 0% up to 95%

Range in buildings

Masonry	20m, through 3 walls maximum
Reinforced concrete	10m, through 1 wall/ceiling maximum
Plasterboard / Wood	30m, through 5 walls maximum
